

Aerial Mapping Solutions for A/E Firms

Need data fast? For less cost?

James W. Sewall Company offers architect and engineering firms practical solutions to expediting their construction and design projects. With competitive pricing, 24-hour estimation, and rapid project turnaround, we can supply accurate, current data in a matter of days to meet a wide range of project requirements, from planimetric/topographic mapping to volumetric measurement, infrastructure location, and digital orthophotography. For over 50 years, we have provided our A/E clients with high-quality aerial photography and photogrammetric mapping. The largest aerial mapping firm in New England, Sewall has the staff and equipment resources to provide very flexible, fast service at reasonable cost. The benefits of Sewall's expertise include:

High quality data. Highly accurate aerial photography, mapping, and digital orthophotography will help you design, develop, and manage your projects wisely. Our airborne GPS & IMU technology can significantly reduce ground control requirements.

Fast delivery. We offer rapid turnaround on mapping projects, dependent upon the date of acceptable survey control and photography.

Competitive pricing. Ask about our pricing based on specified scale, film color, pixel resolution, and contours. For most project areas, we can develop a cost estimate within 24 hours to facilitate your project planning or proposal preparation.

Reliable service. We will continue to provide the value that you expect from Sewall. Knowledgeable staff, advanced equipment, and 127 years of experience will ensure the success of your project.
